

Want to improve resilience to seismic events in New Zealand?

We do. We are collating a ‘menu’ of options that is inclusive and multi-foci — a list that might assist in investment planning for developing resilience to earthquakes.

Why a multidisciplinary menu of options?

To demonstrate a variety of investment options available across a broad spectrum of disciplines covering the built, social, economic, natural, and cultural environments.

How are we accumulating this menu?

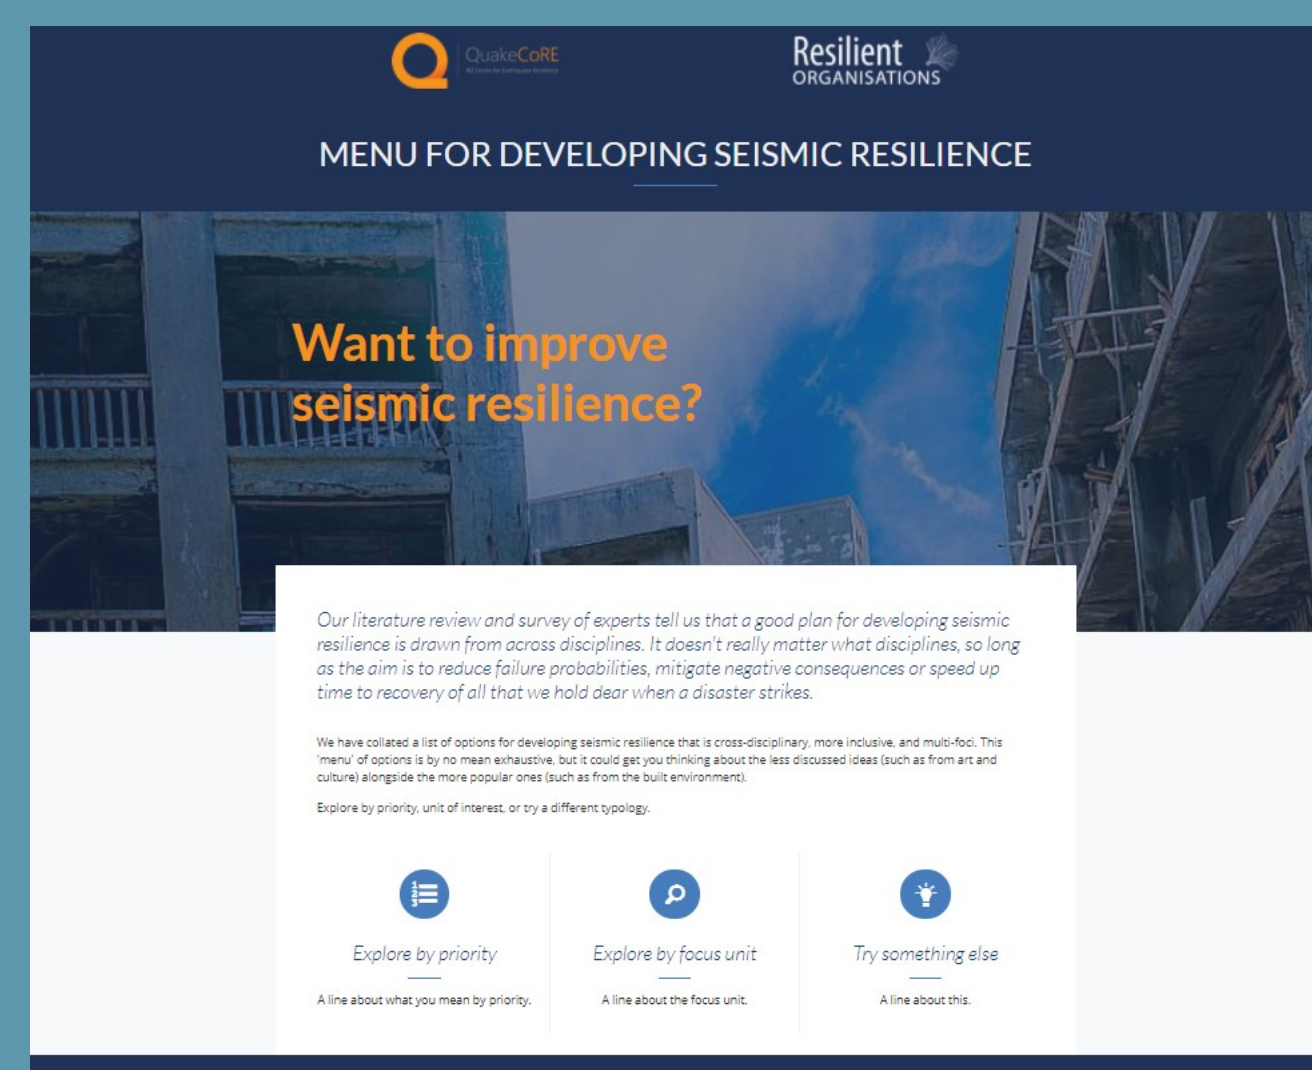

The menu is by no means exhaustive.

It is a tool for considering the less discussed ideas (such as from art and culture) alongside the more popular ones (such as from the built environment).

What does the menu look like?

Take a look at the prototype: resorgs.org/resilience-menu/

Who might find the menu useful?

Anyone interested in developing resilience to natural disasters:

- ▶ Decision makers
- ▶ Stakeholders
- ▶ Advocacy groups
- ▶ Educators
- ▶ Students
- ▶ The public
